## TO MASTERS OF VESSELS SAILING THE GREAT LAKES:

The "Recommended Courses" described in this document have been adopted by the Lake Carriers' Association (U.S.A.) and the Chamber of Marine Commerce (Canada) on the recommendations made from time to time by the respective Navigation and Operations Committees of the two Associations. These "Recommended Courses," with amendments and updates, have been in existence for decades and offer the professional mariner recommended and recognized courses for the Great Lakes in the interest of navigation safety.

While strict observance of these courses is recommended for all Masters, Navigating Officers of the Watch, and Pilots for their respective vessels in the interest of navigation safety, these are "recommended" and "voluntary" lake courses. They are recognized by government agencies and are delineated on general and other charts of the Great Lakes both in paper and electronic formats.

Guidance reference(s) to the use of this document and the "Recommended Courses" are outlined on the next page. Amendments and revisions are documented on the "Amendments" page.

The official charting agencies of the U. S. A. (NOAA) and Canada (CHS) have displayed these recommended courses on their official paper and ENC charts for use by the mariner.

It is fully understood that Masters and Navigating Officers may exercise discretion in departing from these recommended courses when ice, weather, vessel traffic or other conditions warrant a deviation in the overall interest of navigation safety.

## Guidance to LCA/CMC "Recommended Courses"

1. LCA/CMC "Recommended Courses" are provided as voluntary guidance for courses to steer with navigation safety and application of the Collision Regulations always taking priority.
2. Distances are expressed first in Statute Miles followed by Nautical Miles (in brackets), and are provided for all course distance and distance bearing references.
3. Waypoint positions are expressed in "lat/long" to 3 decimal points to correspond to electronic charts and ENC positioning data.
4. Courses to steer, alteration positions with "waypoints" are provided in both "verbal text description" and followed by "electronic waypoint data in table format" for use by the mariner.
5. Electronic "waypoint" course alterations are identified as "Wpt" with the departure position waypoint starting as Wpt 1, and progressing Wpt. 2, Wpt. 3, etc. for successive alteration positions throughout the identified recommended course.
6. Masters and Navigating Officers should be aware that while some of the recommended course lines delineate separation between "upbound" and "downbound" track lines, normally for heavier volume traffic courses; other recommended course lines are single (two-way) reciprocal courses for lesser volume traffic routes, and vessels should always adhere to the Collision Regulations and navigation safety when in any meeting, overtaking or crossing situations. On courses which have a separation between tracks the distances off are limits and the separation between the tracks should be maintained.
7. All courses are expressed in True (T).
8. All bearings are expressed in True (T).
9. Based on the geographical location of the Great Lakes, all latitude references are North $(\mathrm{N})$ and all longitudinal references are West (W).
10. The "recommended courses" are indexed by "lake," and by "upbound and downbound courses" with the exception of Lake Michigan which is referenced as "Northbound and Southbound courses." The courses are also identified as "Inbound and Outbound" as appropriate, and referenced to the heads of navigation.
11. While all efforts have been made to verify accuracy, any noted errors for correction or recommended amendments/improvements should be forwarded in writing or electronically to the respective LCA or CMC Associations. Amendments and updates are documented on the "Amendments" page with highlighted text for ease of reference.

Captain Timothy J. Dayton, Master Mariner, served as the primary project officer for this update. His professionalism and perseverance ensured timely delivery of a quality product. He was supported by Captain John Greenway, LCA/CMC shipping company representatives, their Masters and Mates, and ISMA representation, who provided input and expertise into the latest revision of the LCA/CMC Recommended Courses.
